308209	1 Installation Instructions

THANK YOU FOR CHOOSING KURYAKYN!

TOOLS SUGGESTED

A Set of Standard Allen Wrenches, Torque Wrench and a 7/16" Open-end Wrench

PROCEDURE

STEP 1 Remove the stock oil line cover by removing the two fasteners labeled A and B in PIC.1.

STEP 2 Install the larger of the two Stand-off Studs where fastener B was previously installed being careful not to over-tighten the Stand-off Stud.

STEP 3 Remove the OEM socket head cap screw from the electronic speedometer sensor shown in PIC.2. Replace this fastener with the smaller Stand-off Stud being careful not to over tighten.

STEP 4 Remove the OEM fastener from the transmission trap door located directly in line with the transmission dipstick labeled as C in PIC.1.

STEP 5 Slide the supplied Cupped Spacer onto the boss on the backside of the cover shown in PIC.3.

STEP 6 Slip the cover into place. The lower portion of the Transmission/Oil Line Cover will go behind the clutch cable. These are close quarters so it may take more than one attempt to maneuver the cover into position. The cover will NOT require any bending or twisting to get it in place.

STEP 7 Loosely install the supplied 1/4"-20 X 5/8" Socket Head Cap Screw, Wave Washer (.267 X .423 X .008) and Flat Washer (1/4"), in the front of the cover.

STEP 8 Loosely install the supplied 10-24 X 3/8" Socket Head Cap Screw, #10 Stainless Steel Wave Washer and Flat Washer (.207 X .288 X .045) in the rear of the cover at the electronic speedometer sensor.

STEP 9 Loosely install the supplied 1/4"-20 X 1-1/2" Socket Head Cap Screw, Wave Washer (.267 X .423 X .008) and Flat Washer (.250 X .428 X .062), in the hole in the middle of the cover.

STEP 10 Once all three fasteners are loosely installed, go back and tighten the middle fastener to 7-9 foot-pounds and the front and rear fasteners snugly. DO NOT over-tighten the front and rear fasteners.

STEP 11 Push the supplied Hot Spots into the two 1/4" Socket Head Cap Screws visible on the face of the cover.

PIC. 3

Ride On!
